

New Canaan Nature Center Solar Greenhouse

Project Overview

Photo Credit: New Canaan Nature Center

The interior includes living exhibits, including exotic species, along with work areas and a classroom. Many of the Nature Center's horticultural programs are presented in the greenhouse space. On the southeastern corner of the Greenhouse is a Lath House constructed in 2002-03 as an Eagle Scout project with funding from the Chilton Foundation. It is used to harden off and house plants from the greenhouse. The greenhouse is open to the public.

Location:

New Canaan Connecticut
United States

Project Owner:

New Canaan Nature Center

Submitting Architect:

Donald Watson, FAIA

Building or Project Gross Floor Area:

4,000 square feet
